

AAON, Inc.

Financial Modeling & Forecast Analysis

Prepared by William Wallace

BA in Accounting

University of Lynchburg

Executive Summary

Company Overview

AAON, Inc. is a publicly traded manufacturer of commercial and industrial HVAC equipment. The company has experienced significant growth in recent years through expanding demand, operational investments, and strategic acquisitions. This financial model analyzes AAON's historical financial performance from 2021 through 2025 and develops a three-year financial forecast based on historical operating trends.

Project Objectives

The objective of this project was to build a dynamic financial model capable of analyzing historical operating performance while forecasting future financial results. Historical financial statements were reconstructed from audited SEC filings and used to develop forecasting assumptions that automatically drive projected financial performance.

Methodology

The financial model was developed using audited Form 10-K filings obtained through the SEC EDGAR database and AAON's Investor Relations website. Historical income statements, balance sheets, and cash flow statements were recreated in Microsoft Excel. Key operating metrics—including revenue growth, gross margin, SG&A as a percentage of revenue, capital expenditures, tax rates, and working capital efficiency—were analyzed to establish forecast assumptions. These assumptions were then applied to produce projected operating results for 2026 through 2028.

Key Findings

- Revenue is projected to increase from approximately \$1.44 billion in 2025 to approximately \$1.92 billion by 2028.
- Gross margin is expected to remain near 28% throughout the forecast period.
- Operating margin improves from approximately 10% to approximately 12%.
- Net income is projected to grow from approximately \$108 million in 2025 to approximately \$172 million by 2028.
- Historical financial trends indicate continued profitability supported by stable operating margins and disciplined expense management.

Skills Demonstrated

- Financial statement analysis
- Three-statement financial modeling
- Financial forecasting
- Ratio analysis
- Microsoft Excel modeling
- SEC filing analysis
- Financial reporting
- Business performance analysis
